Overview of Auxiliary Variables

This table shows a list of all auxiliary variables in the anchor data, which were generated during the interview. These variables were mainly used in order for generating filters, but are also helpful for data analysis. For more information on the formal generation process please refer to the respective parts of the Codebook.

In addition, the datasets contain process-generated variables, paradata, weights as well as flag- and tag-variables that are not listed here in detail. A list of these variables as well as information about them are included in the data manual.

Notation key

Notation in filter	Meaning
&	AND
	OR
x=1,2	x=1 OR x=2
x≠1,2	x≠1 AND x≠2
x=1,...,3	x=1 OR x=2 OR x=3
Variable v10x with x=1	Variable v101

In the filter and question text:

Previous wave means: Reference to the wave of the previous year (if d0=1) or to the last wave that an interview took place (if no interview took place in the previous year, i.e. d0=0).

The dependent interviewing variables always contain the newest value, i.e. the value from W2 if d0=1, or the value from W1 if d0=0.

Preparation of the interview by interviewer

INFOBOX

This section serves the sole purpose of documenting the preparation of the interview (either the identification of the anchor or the reporting of a missed interview). The questions or instructions are addressed to the interviewer, who responds alone without the involvement of the respondent. No variables corresponding to these questions are in the dataset.

INFOBOX

The questions pertaining to household and dwelling (hc6h1/hc6h2 to hc14h1/hc14h2) are posed both for the main and the second residence if the respondent reported more than one place of residence. The questioning proceeds in blocks, i.e. all questions are posed first for the current main place of residence and then, in a second iteration, for the second residence. Questions are posed for a maximum of two places of residence.

INFOBOX

The questions 113 (sep4kx) to 117 (sep8kx) were posed in their entirety first for the first relevant child and then for each additional relevant child. In these questions, x corresponds to the child identification number. If a respondent has, for example, two children, whereby the child indicated by child identification number 1 ($x=1$) is not a common child with the relevant ex-partner but the child indicated by the child identification number 2 ($x=2$) is a common child with the relevant ex-partner, then the questions will be posed only for the second child. Thus, the variables for $x=1$ are articulated as -3 "does not apply" and have valid values only for $x=2$.

Children

Definitions

Selection of the children for the children's interview.

The selection of the x th child of the respondent as a CAPI-child is made on the following criteria:

- if a child of the respondent had already been eligible for interview as a CAPI-child in the previous waves:
 - if child x was a CAPI-child in the previous wave, currently lives in the respondent's household, and was born between 1994 and 2002, or
 - if child x was not a CAPI-child in the previous wave, currently lives in the respondent's household, and was born between the birth year of the first CAPI-child and 2002;
- if no child of the respondent has yet been a CAPI-child in the previous waves:
 - if child x is the youngest child living in the respondent's household born between 1995 and 2002. If this is true for more than one child (identical year of birth), the first child mentioned by the respondent from among this group of children is chosen.

If child x (with the child identification number $x=1,\dots,10$) is selected as CAPI-child, the variable capikidkx is set to 1.

$\text{capikidkx}=1$ if $((d420 \neq 0 \ \& \ d(420+x)=1 \ \& \ \text{ehc11kx} \neq 1 \ \& \ \text{ehc10kx}=1,\dots,8 \ \& \ \text{ehc8kxy}=1994,\dots,2002) \mid (d420 \neq 0 \ \& \ d(420+x) \neq 1 \ \& \ \text{ehc11kx} \neq 1 \ \& \ \text{ehc10kx}=1,\dots,8 \ \& \ \text{ehc8kxy}=d420,\dots,2002) \mid (d420=0 \ \& \ \text{ehc11kx} \neq 1 \ \& \ \text{ehc10kx}=1,\dots,8 \ \& \ \text{ehc8kxy}=1995,\dots,2002$ (the youngest child, if more than one child fulfills this criteria (same year of birth), the first mentioned: $x < y$ for all $x=1,\dots,9$ and $y=2,\dots,10$) for $x=1,\dots,10$))

All children reported in the EHC are assigned a fixed person number: $\text{cidx}=\text{id}+200+x$.

Age groups for children modules:

Many questions within the children module are posed only if children of a particular age group are present. In order to increase the clarity of the filters, auxiliary variables corresponding to these age groups are defined in the following table.

Key:

1. Age groups are not disjointed.

Newborn module

INFOBOX

Questions 160 (crn1kx) to 175 (crn10kx_) are posed in their entirety first for the first newborn and then for each additional newborn.
The x in these variables corresponds to the child identification number. If the respondent, for example, already had two older children, and a new child has arrived since the previous wave, the questions are not posed for the first two children with the child identification number one (x=1) and two (x=2); these variables are articulated as -3 "does not apply". The questions are posed only for the newborn (x=3) and the variables have valid values only for this case.

Module for infants and toddlers

INFOBOX

The questions 166 (crn7kx) to 175 (crn10kx_) are posed for each (relevant) child in blocks, i.e. all questions are posed first for the first child and then, in subsequent iterations, for each additional child. Questions are posed first for all children born in 2010/2011 and then for all children born in 2009.

The “x” in the variables refers to the child identification number. If the respondent has, for example, a child born in 2009 and a child born in 2010, the questions are not posed for the older child with the child identification number of 1 and each of the variables are coded with the value of -3 “does not apply”. The questions are posed for both of the younger children, first for the youngest and then for the child born in 2009 and the variables are coded with valid values.

Question 176 (crn11_) is posed at the end and is posed only this one time.
