Introduction

Hi I'm .... I think it's great that you're doing an interview with us! I'm going to ask you a few questions now. There are no right or wrong answers for these questions. We just want to know your personal opinion. So sometimes I will read you sentences, and you can tell me if you think they are right or not so right. I won't tell anyone what you say.

Int: If the answer format changes, always read out loud! If the questions are long, take the time to ask the child if he/she still has an overview of all the answer categories (especially with the eight-year-olds).

NO parent present .... ❏ 1

Siblings

The following questions refer to sibling relationships and how the siblings are treated by the anchor and, if applicable, the partner. For this, the two sibling children should be selected about whom the anchors had also been surveyed in the anchor interview. The procedure for selecting the relevant children is defined as follows:

- If only one child in the household was defined as a CAPI child (Sum(capikidkx)<2), the questionnaire module is not activated; a selection is not necessary.

- If two or more children in the household were defined as a CAPI child, the two youngest CAPI children should be surveyed about each other. In order to select the two youngest children, a rank order according to birth year should be created, beginning with the highest (most recent) birth year. If children in second or third place have the same birth year, a random selection is made.

- Formal criterion: Two auxiliary variables fsk1 and fsk2 are defined for all CAPI children x (capikidkx=1). These variables represent the rank of the two youngest CAPI children according to descending birth year (ties are solved randomly).
  CAPI children with position x (fsk1=x, fsk2=x) are selected as focus siblings. These information are not part of the child data set.

- The variables Geschwister1 and Geschwister 2 are included in the child data set. Geschwister1 refers to the youngest participating sibling in the child interview, whereas Geschwister2 refers to the second youngest child. The values of both variables correspond to the respective child number (cnr), meaning the position within the sibling row. The variable Geschwisterkind is also part of the child data set. It contains the child number(s) of the sibling(s) the CAPI child respondent is asked about.
